CONTENTS

Nos. 1/2

L. H. AHRENS: Studies on the relative abundances of isotopes	1
G. R. TILTON and L. O. NICOLAYSEN: The use of monazites for age determination	28
L. O. NICOLAYSEN: Solid diffusion in radioactive minerals and the measurement of absolute age	41
W. GENTNER and J. ZÄHRINGER: Argon und Helium als Kernreaktionsprodukte in Meteoriten	60
DELLA M. ROY and RUSTUM ROY: Hydrogen-deuterium exchange in clays and problems in the assignment of infra-red frequencies in the hydroxyl region	72
FRITZ F. KOCZY, ERNST TOMIC, und FRIEDRICH HECHT: Zur Geochemie des Urans im Ostseebecken	86
F. F. KOCZY, E. PICCIOTTO, G. POULAERT, et S. WILGAIN: Mesure des isotopes du thorium dans l'eau de mer	103
MARJORIE HOOKER: Data of rock analyses—III. New Zealand periodical and serial literature. Bibliography and index of rock analyses	130
MARJORIE HOOKER: Data of rock analyses—II (supplement)	138
Geochemical Note:	
A. A. SMALES and R. K. WEBSTER: The determination of rubidium in sea-water by the stable-isotope dilution method	139
Letter to the Editors:	
ZDENĚK PÁCAL: Effect of lanthanide contraction in geochemistry	140

No. 3

K. J. MURATA, H. J. ROSE JR., M. K. CARRON, and J. J. GLASS: Systematic variation of rare-earth elements in cerium-earth minerals	141
R. BLIX, H. v. UBISCH, and FRANS E. WICKMAN: A search for variations in the relative abundance of the zinc isotopes in nature	162
R. PARWELL, R. RYHAGE, and FRANS E. WICKMAN: Natural variations in the relative abundances of the nitrogen isotopes	165
O. HIEKE MERLIN, E. PICCIOTTO, et S. WILGAIN: Étude photographique de la distribution de la radioactivité dans la granodiorite de l'Adamello	171
F. E. SENFTLE, LORIN STIEFF, FRANK CUTTITTA, and P. K. KURODA: Comparison of the isotopic abundance of U^{235} and U^{238} and the radium activity ratios in Colorado Plateau uranium ores	189
Geochemical Notes:	
P. K. KURODA, R. R. EDWARDS, BEROL L. ROBINSON, J. H. JONTE, and CLEO GOOLSBY: Chlorine-36 in pitchblende.	194
H. RAMBERG, K. O. BENNINGTON, and W. F. WEEKS: Chemical energy and metamorphism: A discussion	196
Letters to the Editors:	
PAUL E. DAMON: Terrestrial helium	200
K. I. MAYNE: Terrestrial helium: A reply	201
Announcement	204

L. H. AHRENS: Lognormal-type distributions—III	205
R. D. RUSSELL and L. H. AHRENS: Additional regularities among discordant lead-uranium ages	213
HERBERT L. VOLCHOK and J. LAURANCE KULP: The ionium method of age determination	219
ROBERT A. CHALMERS and E. S. PAGE: The reporting of chemical analyses of silicate rocks	247
E. L. FIREMAN and D. SCHWARZER: Measurement of Li^6 , He^3 , and H^3 in meteorites and its relation to cosmic radiation	252
JOHN F. LOVERING, WALTER NICHIPORUK, ARTHUR CHODOS, and HARRISON BROWN: The distribution of gallium, germanium, cobalt, chromium, and copper in iron and stony-iron meteorites in relation to nickel content and structure	263
HEINZ DEGENHARDT: Untersuchungen zur geochemischen Verteilung des Zirkoniums in der Lithosphäre	279
JULIAN R. GOLDSMITH and DONALD L. GRAF: The system CaO-MnO-CO_2 : Solid-solution and decomposition relations	310
THOMAS W. STORM and HEINRICH D. HOLLAND: The distribution of nickel in the Lambertville diabase	335
Books received	348

AUTHOR INDEX TO VOLUME 11

AHRENS, L. H. pp. 1, 205, 213
 BENNINGTON, K. O. p. 196
 BLIX, R. p. 162

I. GENERAL

1. Papers on geochemistry should be submitted to the editors for the appropriate country or language (*Papers on cosmochemistry should be sent to Prof. F. A. Paneth, F.R.S.*). Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. Critical comments or preliminary results requiring early publication should be submitted as "Letters to the Editors." Where possible, letters should be confined to 500 words. The preparation of progress reports and review articles will be invited by the Editors from time to time. The journal appears as independent and complete numbers, which are combined into volumes of about 300 pages.

2. Only papers which have not been previously published will be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta*.

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time the first proofs are returned. A reprint order form will accompany first proofs.

II. SCRIPT REQUIREMENTS

1. Script must be written in one of the three official languages—English, French, or German.

2. The script should be typed (not a carbon copy). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction.

3. Illustrations should accompany the script, mounted on separate sheets. Line diagrams that require to be redrawn should include all relevant details. Half-tone illustrations should be restricted to the minimum necessary. Photographs should be enlarged sufficiently to permit their clear reproduction, and if words or numbers appear on them, two copies should be sent, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should be given on a separate sheet.

4. References in the text should be given by quoting the author's name and year of publication, i.e. AHRENS (1952). **Full references should be listed at the end of each paper, in alphabetical order, in the following manner:**

AHRENS L. H. (1952) *Geochim. et Cosmochim. Acta* 2, 168.

and should include the standard abbreviated title of the journal, year, volume, number and page number.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the Editorial staff.

6. To conserve space, authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.
